CARING FOR YOUR WORKPLACE: DISINFECTING FOGGING

Ensuring your facility is safe to reopen is just as crucial as the routine maintenance required to optimize your workplace. Our disinfecting fogging program plays an important role in reducing the risk of infection in your facility. To keep your facility safe, we utilize CDC recommendations for effective disinfection, efficacy of products, and cost effective procedures at all times.

HOW IT WORKS

In our disinfecting fogging program, our professional cleaners wear PPE and use a fogger to thoroughly distribute water-based disinfectant to create a “fog” or “mist”. Fogging allows disinfectants to attach to vertical surfaces for a longer period of time. Disinfecting fogging is key in cleaning cracks and crevices, hard to reach areas, and areas with soft surfaces like fabric furniture. While fogging alone does not completely disinfect a surface, when used in conjunction with touchpoint cleaning it is an efficient way to apply disinfectant over the entirety of a surface. Performing this fogging process in a consistent and frequent manner is proven to assist in slowing the spread of infectious disease.

BENEFITS OF DISINFECTING FOGGING

Reduces time required to properly distribute disinfectant.

Minimizes cost to properly disinfect an entire facility.

Use of EPA registered and COVID-19 approved products only.

Disinfects cracks and crevices, hard to reach areas, and soft surfaces.
